▪ MOISTURE REPELLENT

▪ RESISTS CRACKING, PEELING & BLISTERING

▪ RESISTANT TO MOLD & MILDEW ON FINISH

▪ PROTECTS AGAINST THE SUN'S UV RAYS

▪ HIGHLIGHTS/ENHANCES NATURAL TEXTURE OF WOOD

COLOR SELECTION TIPS

- Look to Gardens, Furniture or other Structural elements, such as Paving or Accent Stonework that will remain once the staining project is complete.
- Consider neighboring Houses/Structures... You may find great inspiration from newly built homes or even other buildings in the neighborhood to create a color scheme.
- Lighter colors, such as Off-whites, tend to visually 'highlight' the surface being painted...If the goal is to draw the eye **away** from details, they should be painted the dominant color so as not to be noticeable.
- Lighting impacts how colors are perceived...Make sure to **select** colors **outside**, in the area where they will be applied and **during** the hours, when they will be most enjoyed.

APPLICATION TIPS

- Chemically-treated wood **needs** to age at least 28 days and other new dimensional lumber **should** age 2-4 weeks before applying.
- **Watch out for weather!** DO NOT apply Stain in direct sunlight or within 6 hours before or after a rainfall.
- Surface temperature of the wood **should** be below 95F.
- Application conditions should ideally be between 50F-85F.
- For **optimal** protection of the wood, stain **all** 6 sides of the wood to seal and protect it from moisture before construction, **especially** for decks that are close to the ground with little air circulation under the deck boards.
- To dispose of any excess Stain remaining after the project is complete, **contact** your local municipality or your local Rodda Paint Store to understand the Stain recycling options available in your area.
- For complete application **instructions**, please refer to Technical Data Sheet (**TDS**) documents available online at www.roddapaint.com or contact your local Rodda Paint Representative.
